DETAILED ACTION

Response to Amendment

- 1. This action is in response to the communication filed on December 12, 2003.
- 2. Claims 10-18 and 20 are pending in this action. Claims 1-9 and 19 have been canceled.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 4. Claims 10, 11 and 14-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Nomura et al. (CA 2,112,145) newly provided by applicant.

As per claim 10, Nomura teaches, "a speech signal decoding apparatus characterized by comprising":

"a plurality of decoding means for decoding information containing at least a sound source signal, a gain, and filter coefficients from a received bit stream" (Page 5, line 17-25);

"identification means for identifying voiced speech and unvoiced speech of a speech signal using the decoded information" (page 6, lines 11-28);

"smoothing means for performing smoothing processing based on the decoded information for at least either one of the decoded gain and the decoded filter coefficients

Application/Control Number: 09/627,421

Art Unit: 2654

in only the unvoiced speech identified by said identification means" (Page 7, lines 1-13); and

"filter means which has the decoded filter coefficients and is driven by an excitation signal obtained by multiplying the decoded sound source signal by the decoded gain, at least either one of the decoded filter coefficients and the decoded gain using an output result of said smoothing means" (page 8, line 16 to page 9, line 17).

As per claim 11, Nomura teaches, "wherein said apparatus further comprises classification means for classifying unvoiced speech in accordance with the decoded information, and said smoothing means performs smoothing processing in accordance with a classification result of said classification means for at least either one of the decoded gain and the decoded filter coefficients in the unvoiced speech identified by said identification means" (page 11, lines 15 to page 12, line 10).

As per claim 14, Nomura teaches, "wherein said decoding means decodes information containing pitch periodicity and a power of the speech signal from the received bit stream, and said identification means performs identification operation using at least either one of the decoded pitch periodicity and the decoded power output from said decoding means" (page 7, line 26 to page 8, line 15).

As per claim 15, Nomura teaches, "wherein said decoding means decodes information containing pitch periodicity and a power of the speech signal from the received bit stream, and said classification means performs classification operation using at least either one of the decoded pitch periodicity and the decoded power output from said decoding means" (page 7, line 26 to page 8, line 15).

As per claim 16, Nomura teaches, "wherein said apparatus further comprises estimation means for estimating pitch periodicity and a power of the speech signal from the excitation signal and the decoded speech signal, and said identification means performs identification operation using at least either one of the estimated pitch periodicity and the estimated power output from said estimation means" (page 7, line 26 to page 8, line 15).

As per claim 17, Nomura teaches, "wherein said apparatus further comprises estimation means for estimating pitch periodicity and a power of the speech signal from the excitation signal and the decoded speech signal, and said classification means performs classification operation using at least either one of the estimated pitch periodicity and the estimated power output from said estimation means" (page 7, line 26 to page 8, line 15).

As per claim 18, Nomura teaches, "wherein said classification means classifies unvoiced speech by comparing a value obtained by the decoded filter coefficients from said decoding means with a predetermined threshold" (page 7, line 26 to page 8, line 15).

As per claim 20, it is interpreted and thus rejected for the same reasons set forth in the rejection of claim 1 above.

Claim Rejections - 35 USC § 103

- 5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 6. Claims 12 and 13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nomura et al. (CA 2,112,145) as applied to claims 10 and 11 above, and further in view of Takada (US 6,088,670).

As per claims 12 and 13, Nomura does not explicitly teach, "wherein said identification/classification means performs identification/classification operation using a value obtained by averaging for a long term a variation amount based on a difference between the decoded filter coefficients and their long-term average". However, Takada teaches, "wherein said identification/classification means performs identification/classification operation using a value obtained by averaging for a long term a variation amount based on a difference between the decoded filter coefficients and their long-term average" (col. 8, lines 13-53). Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to use difference between the short-term value with a long-term average value to distinguish voiced speech unvoiced speech and noise because Takada teaches his invention is to provide a voice detector which capable of accurately discriminating voiced/unvoiced frames, even when there are rapid changes in noise level (col. 2, lines 46-49).

Conclusion

7. Applicant's submission of an information disclosure statement under 37 CFR 1.97(c) with the fee set forth in 37 CFR 1.17(p) on December 12, 2003 prompted the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 609(B)(2)(i). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Contact Information

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to **Abul K. Azad** whose telephone number is **(703) 305-3838.**

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Richemond Dorvil, can be reached at (703) 305-9645.

Any response to this action should be mailed to:

Application/Control Number: 09/627,421

Art Unit: 2654

Commissioner for Patents

P.O. Box 1450

Alexandria, VA 22313-1450

Or faxed to:

(703) 872-9314

(For informal or draft communications, please label "PROPOSED" or "DRAFT")

Hand-delivered responses should be brought to 2121 Crystal Drive, Arlington,

VA, Sixth Floor (Receptionist).

Any inquiry of a general nature or relating to the status of this application should be directed to the Technology Center's Customer Service Office whose telephone number is (703) 306-0377.
